PROFESSIONAL SUMMARY

AI Developer and Solution Engineer with 3+ years of experience in designing agentic AI and automation solutions for internal support teams. Architected multi-agent workflows and enterprise AI tools that reduced SAP support effort by 30%, integrating LLM agents with SAP data platforms via MCP, Databricks, and containerized CI/CD. Combines strong problem-solving, technical proficiency, and stakeholder communication with experience resolving 600+ complex SAP customer issues and mentoring engineers. Published research in speech recognition and computer vision (speaker recognition, YOLOv5), demonstrating curiosity-driven innovation in applied AI systems.

SKILLS & COMPETENCIES

Languages – Python, ABAP, Java, C, C++, Kotlin, SQL, YAML, Go

Technical skills - Multi-Agent System Design & Orchestration, LLM Integration & Tooling (APIs, Function Calling, Automation), Prompt Engineering, Generative AI, Machine Learning, Natural Language Processing (NLP), Object Oriented Programming, Vector Databases & Semantic Search, Database Development and Maintenance, REST API Integration, Enterprise Resource Planning

Soft skills - Leadership and Critical thinking, Time management and efficiency, Adaptability, Team collaboration

Tools/Platform – AI Core, BTP, Docker, Kubernetes, Kyma, S/4 HANA, Databricks, GitHub, Copilot, Bruno, HANA DB, ServiceNow, JFrog

EXPERIENCE

SAP Labs, Bengaluru: Agentic AI Developer Sep 2025 to Present
GCID CSM Operations Center & Artificial Intelligence CoE EMEA

- Designed and deployed multi-agent workflows for SAP GCID Support engineers (Reducing their work efforts by 30%) using the frameworks CrewAI & LangGraph, enabling task coordination and improved decision-making.
- Developed custom agent tools for data extraction, solution analysis, document parsing (PDF/CSV), and automated reporting. (Worked on SAP BOCR, which was used for image extraction from SOP/PDF/KBA)
- Developed and maintained MCP (Model Context Protocol) server to enable seamless integration between our two repositories' i.e. CLOKS (data warehouse repository) and AIM (AI agents repository)
- Automated execution of Databricks jobs via GitHub Actions, enabling CI/CD-driven orchestration of data processing workflows.
- Built a Retrieval-Augmented Generation (RAG) pipeline on Databricks that ingests enterprise documents, converts content to Markdown, performs semantic chunking, and indexes embeddings in SAP HANA DB to enable semantic search and context grounding for the agents in AIM.
- Designed and implemented CI/CD pipelines for the projects repository, ensuring efficiency (Github Actions).
- Led Docker containerization efforts, cutting image size by 67% (6 GB → 2 GB) to streamline builds and deployments.

SAP Labs, Bengaluru: Associate Solution Support Engineer Feb 2023 to Sep 2025
TS PRC ERP Supply Chain APJ I

- Analyzed complex problems and resolved 600+ critical issues for SAP customers through incidents.
- Mentored junior engineers and external hires, enhancing team productivity by 20% through code/issue reviews and technical workshops on advanced topics of Transportation Management [ABAP, C++].
- Collaborated with cross-functional teams like Extended Warehouse Management (EWM), Materials Management (MM), Sales and Distribution (SD) and Business Network for Logistics (BN4L) to create dataset for internal systems.
- Helped gather information and compile it into a single knowledge repository, which over 300 SAP customers accessed.
- Assisted customers with designing business requirements and ensuring clean core operations for their greenfield or brownfield implementations.
- Detect, document and report bugs in standard S/4HANA TM to AIS/DEV colleagues for quality assurance.

Sandlogic Technologies Private Limited, Bengaluru: AI Intern Jul 2021 to Dec 2021
Deep Learning 2 IN

- Worked on Deep learning in computer vision area along with AI [Python].
- Learned and implemented various models like ResNet and YOLO (You Only Look Once) for supply chain processes.

- Collaborated with team to annotate the dataset for a client project and developed it in YOLOv5 model.
- Evaluated model performance and optimized training pipelines through hyperparameter tuning and data preprocessing, improving detection accuracy and robustness for real-world deployment scenarios.

RESEARCH PAPER AND PUBLICATIONS

Text Independent Speaker Recognition and Classification using KNN Algorithm (Publication [↗](#))

- Conducted research on speaker recognition techniques, achieving a 96.97% accuracy using a double distance measurement method, surpassing the 84.85% accuracy of K-Nearest Neighbors (KNN).
- Investigated "speaker idolization" to improve speech recognition accuracy, audio indexing, and transcription intelligibility, contributing to personalized and secure smart environment technologies.

Real Time Theft Detection Using YOLOv5 Object Detection Model (Publication [↗](#))

- Developed an automated theft detection system using the YOLOv5 object detection model, enabling real-time identification of objects and theft events with alerts to owners and authorities.
- Leveraged deep learning concepts, including neural networks and object detection, to address the global challenge of theft through innovative, automated solutions.

CERTIFICATIONS

- SAP Certified - SAP Generative AI Developer – [View Certificate](#)
- Agentic AI Fundamentals – [View Certificate](#)
- Build AI Agents & Chatbots with LangGraph – [View Certificate](#)

EDUCATION

Incoming Masters student at Texas A&M – Computer Science (MCS)

Bachelor of Engineering - Electronics and Communication

JSS Science and Technology University, India

Course work – Computer Networks, Operating system, Cryptography and Network Security

Jul 2019 to Jul 2023

8.94/10 CGPA
